

JOÃO PEDRO ALVITO

SYSTEMS, CONTROL AND ROBOTICS ENGINEER

João Pedro Alvito, Karlavägen 21B, Stockholm, Sweden

ESA - Young Graduate Trainee

December 13, 2014

Cover Letter

To Whom It May Concern,

I am writing this letter, not only to apply to the position of Space Automation and Robotics in the program Young Graduate Trainee Opportunities, but also to accomplish what is a dream of mine: be able to work with autonomous robots.

During both my university and working experience I acquired a considerable amount of experience dealing with autonomous robots. In my double-degree in robotics I had a very broad education about the different fields of robotics which gave me a great overview of knowledge about autonomous robots. By working and studying outside the country where I lived most of my life (Portugal), I grew up tremendously as a person and an engineer by surpassing all the new adversities that I found along the way. Resuming, I see this position as the perfect fit for me, both due to my qualifications and personality, I can only say that I just hope that you feel the same way about me.

For more information about my background and qualifications please refer to the curriculum vitae and do not hesitate to contact me.

Sincerely yours,

João Pedro Alvito
